

High Security Cam Locks & Keeps

Features

- High security**
 Engineered for strength to offer premium security for vertical sliding windows. The combination of six fixing points, a stainless steel keep faceplate and a forged cam give increased resistance to physical attacks. Can also be fitted with a standard perfectly matching keep if security not required
- Stylish design**
 Sits discreetly on the window with a choice of lever style – Classic, Heritage or Architectural
- Perfectly Matching**
 Each lever design has a corresponding bottom Sash Knob for that Classic, Heritage or Architectural window design
- Colour coordinated screws**
 Perfectly match to the Cam Lock, even down to the small details and available in the complete range of Hardex finishes
- Designed for PVCu, Timber and Aluminium sliding windows**
 To suit all window materials, we have a range of different keeps to suit specific profiles
- Tried and Tested**
 Tested in our UKAS test facility to meet the requirement of Secured by Design on a number of window systems including Spectus, Veka, Rehau and Eurocell. A range of system specific accessories designed to achieve PAS 24:2012 are also available including Chimneys, Aluminium Security Strips and Guide Catches
- Guaranteed**
 The high security packaged is supported by the ERA Total Security Guarantee for homeowners giving them peace of mind

Chimneys:	Nylon
Security Strips:	Aluminium
Guide Catches:	30% Glass filled Nylon, Stainless Steel spring, Aluminium side catch
Sash Packed:	Nylon

Maintenance
For continued protection of the quality finish and appearance, we advise routine cleaning of all our external hardware. We recommend wiping it with a clean cloth soaked in warm water and mild detergent every month. Please refrain from using heavy-duty cleaners, containing Chlorine or Potassium. Moving parts should also be lightly lubricated using a light non-acidic mineral oil (e.g., "3 in 1") at least twice per year. The product may need to be adjusted and fixings tightened to ensure a satisfactory operation. This procedure is particularly essential if products are used within a 25-mile radius of coastal areas or close proximity to building sites or large industrial areas, where more frequent cleaning may be required to prevent the accumulation of corrosive contaminants.
